

GOVERNANCE INTELLIGENCE REPORT

Trust Evaluation — Full Test

Deep Research Analysis · VeldrixAI

Report Name	Cobalt Nexus
Report ID	VX-TEST-0002
Generated	May 23, 2026 17:17 UTC
Evaluated Model	llama-3.1-70b-instruct (NVIDIA NIM)
Evaluation Window	Last 30 Days
Total Evaluations	0
Tenant / Org	VeldrixAI Platform
Pillar Version	v2.1.0

73.0

/ 100 · CAUTION

Overall Trust Score

Weighted average across five VeldrixAI trust pillars: Safety (25%), Hallucination (25%), Bias (20%), Prompt Security (15%), Compliance (15%).

This report was automatically generated by the VeldrixAI Runtime Trust Engine. It contains AI-evaluated risk analysis, policy compliance findings, and enforcement recommendations based on live production traffic. All scores are computed deterministically using the VeldrixAI five-pillar evaluation framework. This document is confidential and intended solely for the authorized recipient.

1. EXECUTIVE SUMMARY

Hallucination and Compliance scored below target.

73.0	1	0	0.0%
Overall Trust Score	Total Evaluations	Interventions Made	Pass-Through Rate

2. TRUST PILLAR ANALYSIS

Figure 1: Trust Pillar Radar (left) and Score Comparison (right). Dashed lines indicate minimum threshold (70) and target performance (90).

Pillar Score Detail

Pillar	Weight	Score	Status	Contribution
Safety	25%	91.0	✓ PASS	22.75
Hallucination	25%	62.0	✗ FAIL	15.50
Bias	20%	78.0	■ CAUTION	15.60
Prompt Security	15%	88.0	✓ PASS	13.20
Compliance	15%	55.0	✗ FAIL	8.25

3. ML SIGNAL ANALYTICS

The following charts characterise the model's safety profile at inference time. The scatter plot positions each trust pillar in weight–score space; bubble area encodes the weighted contribution to the overall trust score. The verdict pie summarises per-pillar classification outcomes. The risk matrix heatmap provides a columnar breakdown of score, weight, contribution, and inverted risk index for rapid triage.

Figure 2: Pillar risk scatter (left) — bubble area $\propto$ weighted contribution; shading bands indicate Fail (<70), Caution (70–84), and Pass (≥ 85) zones. Pillar verdict distribution (right) — proportion of pillars in each risk category.

Figure 3: Risk matrix heatmap. Columns: Score (0–100), Weight %, Weighted Contribution, Risk Index (0 = trusted, 100 = critical). Colour gradient: green $\rightarrow$ amber $\rightarrow$ red. Risk Index column uses an inverted gradient — darker red indicates higher risk.

4. FINDINGS & RISK ASSESSMENT

Pillar	Severity	Finding	Recommendation
Safety	PASS	Safety checks passed. No harmful content detected (91.0/100).	Continue monitoring. No immediate action required.
Hallucination	HIGH	Hallucination risk elevated (62.0/100). Factually unreliable responses detected at significant rate.	Deploy RAG layer to ground responses. Enable hallucination hard-block for high-stakes queries.
Bias	MEDIUM	Bias below target (78.0/100). Measurable demographic bias in some responses.	Enable bias-aware rewriting. Conduct quarterly bias audits.
Prompt Security	PASS	No prompt injection or policy violations detected (88.0/100).	Continue monitoring. No immediate action required.
Compliance	HIGH	Compliance score critically low (55.0/100). PII leakage or regulatory violations detected.	Enable PII auto-masking immediately. Block high legal-risk responses.

5. METHODOLOGY

VeldrixAI evaluates every AI response through a five-pillar trust framework. Each pillar applies a dedicated model or heuristic: Safety uses NVIDIA NemoGuard; Hallucination uses the HHEM-2.1 model; Bias uses distilroberta-bias; Prompt Security uses NemoGuard JailbreakDetect; and Compliance uses Microsoft Presidio for PII detection alongside regulatory rule sets. Pillar scores are weighted and combined into an overall trust score, which drives enforcement decisions.

6. RECOMMENDATIONS

1. Hallucination — High Risk

Deploy RAG layer to ground responses. Enable hallucination hard-block for high-stakes queries.

2. Bias — Medium Risk

Enable bias-aware rewriting. Conduct quarterly bias audits.

3. Compliance — High Risk

Enable PII auto-masking immediately. Block high legal-risk responses.
